

Product Environmental Profile

ACTASSI CAT6A FFTP LAN CABLE

General information

Reference product	ACTASSI CAT6A FFTP LAN CABLE - VDICD64X218
Description of the product	The main purpose of the Actassi Copper LAN Cable product is to cover needs for the transmission of gigabit Ethernet protocols over LAN (local area network) cabling installations within buildings.
Description of the range	Single product
Functional unit	To transmit 1 communication signal on 1m, at a frequency of α Hz, during X years and a Y% use rate for an application Z, in accordance with a reference lifetime of 10 years.
Declared unit	For 1 unit of 500 m with a frequency of α Hz, used for X years at a Y% usage rate for application Z, the conversion factor to the functional unit is: $1 \text{ m} / 500 \text{ m} = 0.005$
Specifications are:	α , frequency = 550MHz X, years = 10 Y, use rate = 100% Z, application = Data centers

Constituent materials

Reference product mass	72 g	including the product and its packaging.
------------------------	------	--

Plastics	36.4%
Metals	51.8%
Others	11.8%

Substance assessment

Details of ROHS and REACH substances information are available on the Schneider-Electric website

Additional environmental information

End Of Life	Recyclability potential:	56%	The recyclability rate was calculated from the recycling rates of each material making up the product based on REEECYLAB tool developed by Ecosystem, for components/materials not covered by the tool, data from the EIME database and the related PSR was taken. If no data was found a conservative assumption was used (0% recyclability).

Environmental impacts

Reference service life time	10 years		
Product category	Communication and data wires and cables		
Life cycle of the product	The manufacturing, the distribution, the installation, the use and the end of life were taken into consideration in this study		
Electricity consumption	The electricity consumed during manufacturing processes is considered for each part of the product individually, the final assembly generates a negligible consumption		
Installation elements	This product does not require a special installation procedure and requires little to no energy to install. The disposal of the packaging materials is accounted for during the installation phase (including transport to disposal). The material constituents of the packaging are wood (57.14%), cardboard (24.76%) and steel (18.10%).		
Use scenario	Load rate = 100% Use rate = 100% RLT		
Time representativeness	The collected data are representative of the year 2025		
Technological representativeness	The Modules of Technologies such as material production, manufacturing processes and transport technology used in the PEP analysis (LCA EIME in the case) are similar and representative of the actual type of technologies used to make the product.		
Geographical representativeness	Final assembly site	Use phase	
	France	France, Sweden
